Interface
    Validate
Abstract Method
    public boolean isValid(int value)

i

i

Class
    Statistics
Method
    public Statistics()
    void findLow(Student [] a)
    void findHigh(Student [] a)
    void findAvg(Student [] a)
    public boolean isValid(int score)
Values
    private int [] lowscores = new int [5];
    private int [] highscores = new int [5];
    private float [] avgscores = new float [5];
    static final int totalNumOfStudent = 40;

Class
    Util
Method
    public Util()
    public Student [] readFile(String filename, Student [] students)
    public boolean isValid(int value)

a

a

Class
    Student
Method
    public Student()
    public Student(int id, int [] scores)
    public int getSID()
    public int[] getScores()
Values
    private int SID;
    private int scores[] = new int[5];
